

MANAGED ENERGY PROGRAM

Turnkey energy upgrades for your business

Pacific Gas & Electric (PG&E)'s new SMB Managed Energy Program makes it easy for businesses to more efficiently manage your building's electricity use—yielding savings on your energy bill every month.

The program analyzes the last 12 months of your electric use to identify potential savings for your company's buildings, then a professional will conduct a site visit to confirm the custom energy solutions that will work best for you. It also connects you with a balance-sheet-neutral financing package that provides immediate locked-in monthly savings and allows you to proactively manage your company's related energy cost for years to come.

By taking advantage of this turnkey opportunity you'll enjoy many benefits, including:

- Greater cost control and profitability with lower, fixed monthly energy bills
- Automated, energy-efficient facilities yielding enhanced comfort, performance, and reliability
- No cash outlay for facility or equipment upgrades
- Better Control of your building during demand response events with no business interference
- Increased facility sustainability and smarter energy management

By managing energy and improving performance through PG&E's program, your business will enjoy long-term sustainability and savings that benefit your bottom line. It's a smart way to update your building at no cost while modernizing key systems and improving energy reliability for your business and community.

Ready to see how PG&E's SMB Managed Energy Program can clear the way to enhanced building performance and reduced energy expenses for your business?
